**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no antecedent for "the converter" in Claim 4, line 2.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-7 and 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chardin (3594805).

Regarding Claims 1-7 and 9-15, Chardin shows in Figs 1 and 2, an antenna comprising a converger, including a conductor 2 which converges a magnetic flux of an EM wave, and a converter 3 comprising a cutout, and a resistance reducer 5 provided on a peripheral portion of the conductor 2, all arranged as claimed. IT would have been obvious to the skilled artisan that the annular conductor 2, converter 3, with a cutout and sleeve 5 for reducing resistance, all perform the

functions alleged here. As to Claim 6, it is obvious that the size of the converter is much smaller than the intended frequencies to be received.

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chardin as applied to claims above, and further in view of Hadden et al (5223851).

Hadden et al are cited to show that an antenna 10 may be formed on a semiconductor IC 34. It would have been obvious to the skilled artisan to employ such an antenna as in Chardin along with an IC as taught by Hadden et al.
